PROFESSIONAL SUMMARY

Results-driven Cybersecurity Analyst with hands-on experience in data protection, encryption, database activity monitoring, SOC operations, penetration testing, and blockchain development. Proven ability to deliver client-facing Proofs of Concept (POCs) and production deployments for major financial institutions including Meezan Bank, MCB Bank, and United Bank Limited (UBL).

Proficient in enterprise-grade platforms including Thales Cipher Trust Manager, Imperva DAM, RSANetWitness SIEM, Carbon Black EDR, and SIRP SOAR. Strong foundation in programming, network security, and threat analysis with a track record of contributing to enterprise-level defense strategies and developing secure, innovative solutions.

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst – Data Protection & Encryption

January 2026 – Present (Promoted from Junior Cybersecurity Analyst)

Infotel Pakistan — Karachi

• Implement and manage Thales Cipher Trust Manager (CTM) for enterprise database security, encryption key lifecycle management, and data-at-rest protection across critical systems.

• Designed and executed a Proof of Concept (POC) for Meezan Bank demonstrating CTM compatibility with Oracle and MSSQL databases; validated DR failover by backing up encrypted databases via RMAN and NetBackup, restoring to a DR server, migrating the wallet, and successfully reconnecting to CTM using the same encryption keys — eliminating dependency on the primary server.

• Deployed and operationalized Imperva Database Activity Monitoring (DAM) infrastructure at United Bank Limited (UBL) across both production and disaster recovery (DR) sites; installed and configured database agents on critical Oracle and MSSQL instances, implemented audit and security policies, and validated real-time monitoring. Solution is live in production, actively auditing sensitive banking data traffic and enforcing policy.

• Delivered a completed Imperva DAM Proof of Concept at MCB Bank — deployed the solution within MCB's environment and demonstrated its full value proposition: privileged user monitoring to audit DBA activity, real-time alerting and blocking of abnormal access and database attacks, compliance audit trails aligned to PCI-DSS and SOX, data forensics to reconstruct suspicious events, and user rights management to surface excessive or dormant access to sensitive data.

• Deploy and administer Imperva Database Activity Monitoring (DAM) to audit, monitor, and alert on database access patterns, detecting unauthorized activity and policy violations in real time.

• Configure encryption policies and access controls to ensure compliance with data security standards and minimize exposure of sensitive organizational data.

• Conduct regular reviews of DAM audit logs, security alerts, and incident reports to identify anomalies, support escalation, and assist forensic investigations.

• Collaborate with IT and infrastructure teams to integrate cybersecurity products into existing environments, ensuring maximum coverage and minimal disruption.

• Support evaluation and onboarding of additional data security products, contributing to the organization's broader data protection roadmap.

Cybersecurity Intern – Security Operations Center (SOC)

June 2024 – August 2024

Pakistan International Airlines (PIA) — Karachi

- Monitored and analyzed security events using **RSA NetWitness SIEM** to identify threats and anomalies across the enterprise environment.
- Investigated and triaged alerts with **Carbon Black EDR**, assisting in malware detection, behavioral analysis, and endpoint security hardening.
- Supported incident response by leveraging **Kaspersky EPP** for endpoint protection, containment, and remediation of detected threats.
- Utilized **SIRP SOAR** platform to automate alert handling, streamline case management, and generate structured incident reports.

- Collaborated with SOC analysts on threat intelligence gathering, log correlation, and escalation procedures to strengthenthe defensive posture.
- Gained hands-on experience in security monitoring, vulnerability management, and real-time incident handling in ahigh-stakes enterprise environment.

TECHNICAL SKILLS

Programming	C, C++, Python, OOP, Data Structures, Algorithms, Solidity
Security Tools	CipherTrust Manager, Imperva DAM, RSA NetWitness (SIEM), Carbon Black (EDR), Kaspersky EPP, SIRP SOAR, Metasploit, Wireshark, Kali Linux
Networking	VLAN, DHCP, SSH, Telnet, TCP/IP, OSI Model, Enterprise Network Design, Cisco Packet Tracer
Cybersecurity	Data Protection & Encryption, Database Activity Monitoring, Vulnerability Assessment, Penetration Testing, Digital Forensics, Reverse Engineering, Threat Modeling, Threat Intel
Databases	Oracle, MongoDB, Microsoft SQL Server
AI & Blockchain	AI-based Threat Detection, Ethereum Smart Contracts, Decentralized Applications
Operating Systems	Linux (Ubuntu, Kali, RHEL, Oracle Linux), Windows
Certifications	CompTIA Security+ (In Progress), CEH – Certified Ethical Hacker (In Progress)

ACADEMIC PROJECTS

- **Blockchain Vehicle Taxation System (Final Year Project)**
  Built a tamper-proof vehicle taxation platform on Ethereum using Solidity smart contracts; automates tax collection, creates an immutable audit trail, and enables detection and investigation of fraud.
- **AI-Powered Vulnerability Detector**
  Developed an AI model to detect SQL Injection (SQLi), CSRF, and XSS vulnerabilities in web applications.
- **Blockchain Voting System**
  Implemented a decentralized, tamper-resistant voting platform with Ethereum smart contracts ensuring election integrity and verifiable results.
- **RBAC Healthcare Management System**
  Built a secure healthcare records system with role-based access control (RBAC) across patient, doctor, and admin roles.
- **Enterprise Networking Simulation**
  Designed enterprise networks with VLAN, DHCP, routing, and secure remote access in Cisco Packet Tracer.
- **Bank Management System**
  Built an interactive banking solution with secure account handling in C++.
- **Pac-Man Game**
  Recreated a classic game in C focusing on AI movement logic and user interaction.

EDUCATION

Bachelor of Science in Cyber Security 2022 – 2026
FAST NUCES — Karachi

Intermediate (Pre-Engineering) 2016 – 2021
Cadet College Petaro

HACKATHONS & COMPETITIONS

- Capture The Flag (CTF) – Cybersecurity Competition
- Coder's Cup – Programming Hackathon
- Ignite Hackathon – Innovation in Security Systems
